

These guidelines must be followed for Seamless1 to guarantee results.

After Care

- Avoid washing hair for 12 hours after application.
- To maintain warranty and the quality of your new extensions be sure to use approved S1 products.
- To keep your extensions feeling soft use Nourishing and Deep Conditioning hair care.
- Use of a serum is highly recommended to nourish your extensions, however avoid the tape area.
- Consult with your stylist to recommend suitable products for protection before ironing your extensions (no hotter than 200°).
- Real human hair requires you to brush your extensions gently daily. Brush extensions when dry before/ after washing, small section at a time. Avoid brushing when hair is wet as the tape is most vulnerable to slide off.
- We recommend your extensions be re-fitted between 6-10 weeks.
- Please ask your stylist for advice on how to put your hair up.
- Best to plait or braid your hair while swimming in the ocean. In a swimming pool best to wear a cap and avoid chlorine on your hair to ensure longevity. Salt and pool water are ok with extensions and tape, however avoid them if you want your hair to last longer.
- We highly recommend to saturate your hair with serum, mask or leave-in conditioner before swimming for ultimate protection.
